Abstract (en)

[origin: EP1826330A2] The method involves connecting a holding element with a holohedral wall layer (9) for a wall covering. A plastic deformable coating (13) is applied on the holohedral wall layer or the holding element during the prefabrication in a plant, and the coating is hardened in frame of the prefabrication in the plant. An independent claim is also included for a prefabricated wall element, which has a holohedral wall layer, where a holding element is connected with the holohedral wall layer for a wall covering.
