Abstract (en)
[origin: EP1826342A1] The gate has an emergency door (3), and several adjustable gate sections (2) connected with each other along their longitudinal edges in a foldable manner. A door latch (5) and a handle (6) open and close the emergency door by drive locks (7, 8), respectively, where the locks run in vertical and horizontal directions. The door latch and the handle are connected with a closure mechanism (10) engaging the gate sections in a force-fit manner. The drive locks (7) are divided into multiple drive lock sections, where movement of the drive locks (7) and/or the closure mechanism is lockable.
