Abstract (en)
[origin: EP1826343A2] A blocking mechanism for drawers, slidably housed in a fixed structure, comprises at least one rocker arm (4), rotatably hinged to the drawer and having at least first means for blocking (6) engageable with a respective first portion (7) of the fixed structure, for blocking the drawer in a closed configuration in which the drawer is in a closed position contained within the fixed structure. The mechanism (1) further comprises a handle (17) constrained to a front portion (3) of the drawer and associated with the rocker arm (4), for activating an unblocking command starting from the closed configuration.
