Abstract (en)

[origin: EP1826514A1] The installation has two modes of operation. It is switched into another mode of operation to produce cooling energy for additional cooling e.g. winter sports. The installation has evaporators (7,9) which acts upon a refrigeration circle during cooling of a component (11,12). The installation has a capacitor (5) which is arranged in the former mode of operation with an evaporator in an internal refrigerant cycle.
