Abstract (en)

[origin: EP1826633A1] The watch has an oscillating weight (8) whose movements are transmitted to a barrel spring of the watch. A running reserve indicating device (1) includes a needle (2) indicating a running reserve induced by the rotation of the oscillating weight, where the needle is mounted on the oscillating weight. A differential mechanism (6) has two inputs and an output, where one input is constituted by a setting wheel (4) connected kinematically to the indicating device.
