Abstract (en)  
[origin: WO2006064293A1] The invention relates to structure of the collapsible fishing trap (A) that consists of several parts connected with mesh. The collapsible fishing trap consists of the frame made of at least four loosely connected arms. The trap may consists of the frame (B) or the frame (C) . The frame (B) has the main arm (3) with the thread (4) over which there are pulled the loops (2) of the arms (1) , fixed with the nuts (5) . The frame (C) consists of arms with loops that are pulled over bolts and fixed with nuts. The collapsible fishing trap frame is, when unfolded, covered with mesh over all its sides except one opening in the narrower lateral side. In the free opening, the mesh covers lateral sides of the adjacent arms, but leaving the opening (11) in the middle of the frame, through which the fish will enter the trap. When the collapsible fishing trap is unfolded, two arms in the upper The invention relates to structure of the collapsible fishing trap (A) that consists of several parts connected with mash. The collapsible fishing trap consists of the frame made of at least four loosely connected arms. The trap may consists of the frame (B) or the frame (C) The frame (B) has the main arm (3) with the thread (4) over which there are pulled the loops (2) of the arms (1) , fixed with the nuts (5) . The frame (C) consists of arms with loops that are pulled over bolts and fixed with nuts. The collapsible fishing trap frame is, when unfolded, covered with mash over all its sides except one opening in the narrower lateral side. In the free opening, the mash covers lateral sides of the adjacent arms, but leaving the opening (11) in the middle of the frame, through which the fish will enter the trap. When the collapsible fishing trap is unfolded, two arms in the upper position are connected with clamps (10) . After folding the trap, all arms are connected with the same clamps.
