Abstract (en)

[origin: WO2006061388A1] Disclosed is a method for operating a dishwasher comprising at least one partial program step "drying" in which air from a washing container of the dishwasher and/or ambient air is directed through a sorption column with reversibly dehydratable material into the washing container by a fan, and humidity is removed from the air when the same is directed therethrough. The fan is operated at different rotational speeds in accordance with a main controller of the dishwasher in order to influence the adsorption process.
