Abstract (en)

[origin: US2008015496A1] The invention relates to a device which is used to transfer a medicament from a bottle to an infusion bag or a hypodermic syringe and which comprises a tubular chamber (1). According to the invention, one end of the chamber is open (2) such that the bottle can be inserted therein, while the other end is closed by means of a divider (3) bearing a hollow needle (5). The inventive device completely covers the bottle during the use thereof. In addition, the upper part of the aforementioned chamber (1) is equipped with spring tabs (7) having a free end (8) which is directed towards the interior of the chamber. The device also comprises connection means, e.g. of the female luer lock (9) or male luer lock type.
