Abstract (en)
[origin: US8168715B2] According to the invention, a sliding coating for winter sports equipment is provided, which has a copolymer (I) and optionally a copolymer (II), wherein the sliding coating for a winter sports equipment comprises a copolymer (I) having 10% or more of structural building blocks derived from propylene monomers, based on the total number of the structural building blocks of the copolymer (I), and 1% or more of structural building blocks derived from another olefin, based on the total number of the structural building blocks of the copolymer (I), wherein the sliding coating does not have a copolymer, which has 50% or more of structural building blocks derived from ethylene monomers, based on the total number of the structural building blocks of the copolymer.
