Abstract (en)
[origin: WO2005119568A2] Methods and systems for creating, managing, and operating electronic games are provided. Example embodiments provide a DVD game environment ("DGE") that includes game flow logic, interactive DVD game content, enhanced methods of scoring and play, automatic skill level adjustment, and an electronic game board. In one embodiment, the DGE comprises DVD game logic with scoring management, game and participant state information, video and audio game content, and an electronic game board. These components provide functionality that can be incorporated into a DVD game that presents challenges for entertainment, education, training, or testing purposes. The DVD games produced thereby can automatically provide challenges based upon participants' skill levels and automatically detect the correctness or incorrectness of a response in order to maintain an electronic game board.
