Abstract (en)

[origin: DE102004060163B3] A two part support for the bar in an equestrian fence, e.g. for show jumping, has a two part construction with an adaptor (35) provided with two rear fitting studs (45, 47) to fit into one of an array of holes in an upright and with a bar support (11) fitted into a slot in the front of the adaptor using two studs. The fitting includes a sprung grip to hold the two components together. The bar is displaced from the support by horizontal forces and the bar support is released from the adaptor by vertical forces. The two part support can be made of plastic mouldings.
