Abstract (en)

[origin: WO2006069976A2] The invention relates to a method for reversing a vehicle into a parking space. According to said method, a nominal parking trajectory of the vehicle is determined by means of a control unit, and a steering angle for steerable wheels of the vehicle, which can be adjusted in order to drive into the parking space, is determined on the basis of the nominal parking trajectory. The inventive method is characterised in that the nominal parking trajectory ( $Y_{B(X)}$ ) is determined on the basis of two reference trajectories ( $y_{Lower(x)}$ ;  $Y_{Upper(x)}$ ) according to a position of the vehicle. The reference trajectories ( $y_{Lower(x)}$ ;  $Y_{Upper(x)}$ ) represent parking trajectories for parking carried out from different starting points.
