Abstract (en)
[origin: WO2006059144A1] A waste bin construction consists of a waste bin in the form of a generally upwardly open container (30) having a base and one or more side walls (3). Running down a side wall is a vent tube (31) having one open end at or near the base and the other at or near the upper rim of the container. The lower end of the tube is connected to a housing (32) for the receipt of a deodorising block, over which air drawn through the vent tube (31) passes when a bin liner is lifted out of the container (30). The tube (31) and housing (32) may be retrofitted to an existing bin.
