Abstract (en)  
[origin: WO2006063976A1] The invention relates to intrinsically viscous, hardenable mixtures containing (A) at least one reaction product (a1) formed by at least one reaction product (a11) formed by at least one olefinically unsaturated carboxylic acid and (a12) at least one glycidyl ester of an unsaturated carboxylic acid (a121), and (a2) at least one polyisocyanate having an epoxide group content (calculated as M = 42 Dalton) < 0.2 wt. % and an acid count < 10 mg KOH/g; and (B) at least one additive controlling the rheological properties. The invention also relates to a method for producing said mixtures, and to the use of the same.
