Abstract (en)
[origin: WO2006067290A1] The invention concerns an absorptive form device comprising at least two formwork elements (1a, 1b) arranged parallel to create a space (2) for casting a filling material, said formwork elements (1a, 1b) having each a vertical blank (3a, 3b) for delimiting a basement wall, said vertical blank being extended towards the ground by an oblique blank (4a, 4b) delimiting at the base of the formwork element (1a, 1b) an enlarged space forming the moulding cavity (5) of the foundations. The vertical blank of the outer formwork element (1a) exceeding the height of the inner formwork element (1b), so as to obtain a moulding frame for the casting in one single operation of the foundations (7), the basement wall (8) and a slab (9).
