Abstract (en)
[origin: WO2006060018A1] A door hinge providing lateral and horizontal adjustment of an engaged door with a door frame. The hinge features a base (10) for fixed engagement to a frame and a door leaf (40) for engagement to a door. The hinge pin (30) features a top end rotationally engageable with the door leaf and a bottom end eccentrically mated to a bottom end and rotationally engageable with an eccentric bushing (20) in the base. Rotation of the hinge pin translates the door leaf toward and away from the base a first distance. Rotation of the bushing translates the door leaf toward and away from the base a second distance. An adjustment bolt (50) engaged in the door leaf provides for vertical adjustment of the door leaf toward and away from the base.
