Abstract (en)
[origin: DE102004061231B3] The oven door (2) has a recess (8) for the latch (6) hook (7) which is a locked position due to a projection (14) on the motor shaft (9) raising the other end (22) of the latch lever. Rotation of the shaft releases the latch lever end to raise the latch hook by means of a torsion spring (26). To accommodate a height variation (R) in the door the latch lever pivot arms reside in vertically slotted holes in the holding bracket (23).
