Abstract (en)

[origin: WO2006066432A2] The winding device of automatic watches comprises means serving to receive at least one watch, and a motor for rotationally driving these means via a set of gears. The set of gears comprises a bridge (2) formed of at least one arm (18) on which a pinion (4) is rotatively mounted while meshing with a toothed wheel (5). The means for receiving at least one watch are rotationally fixed to said pinion (4).
