Abstract (en)

[origin: WO2006061060A1] The invention relates to a multi-function operating device for a hierarchical menu structure consisting of a plurality of menus. Said operating device comprises a screen, a plurality of control keys, to which respectively one function in the menu structure can be arbitrarily allocated, said function being selected when the respective control key is actuated, and associated optical information relating to the function on the screen, selected by the operating key. An operating status is associated with the control keys, the associated optical information relating to the selectable function being reproduced on the screen.
