Abstract (en)
[origin: WO2006063602A1] The invention relates to a system for using at least one mobile terminal in a motor vehicle, such as especially a private car or a two-wheeled vehicle, comprising the at least one mobile terminal, a display device arranged in the vehicle, an operating device provided in the vehicle, and a communication interface between the motor vehicle and the mobile terminal. The aim of the invention is to provide an improved system for using mobile terminals in a motor vehicle. To this end, a first software integration device for identifying a mobile terminal located in the vehicle is provided in the motor vehicle and/or a second software integration device for identifying a motor vehicle in the vicinity is provided in the mobile terminal. According to the invention, a software application on the mobile terminal is determined. A software integration application is downloaded via a communication connection by means of a downloading device located inside and/or outside the vehicle, and the software application on the mobile terminal is provided by means of the downloaded software integration application for using in the motor vehicle with the display device and the operating device provided in the motor vehicle.
