Abstract (en)  
[origin: WO2006058151A2] A monitoring system and method for monitoring the total delivery of medication to a patient while in a healthcare facility. The system includes a processor that stores medication delivery data in a data storage unit. The processor also configured to access remote databases to obtain any further data concerning the medication delivery to the patient and store that further data in the data storage unit. The processor is further configured to display the stored data concerning total medication delivery to the patient in selectable formats indicating individual, selectable organizations of the data selectable by the clinician.
