Abstract (en)

[origin: WO2006066884A1] The invention relates to an operating device (1) for lighting devices (LA), such as e.g. a ballast (EVG) for electric discharge lamps. Said operating device comprises an interface (5, 9) for receiving external control commands for operating the lighting device (LA). The inventive method is characterized in that the firmware of the operating device (1) and/or the interface (5, 9) can at least be partially programmed via additional information transmitted via the interface (5, 9).
