Abstract (en)

[origin: EP1829812A2] The device has a management calculator (1) and a safety calculator (2) for calculating embarked load and defining operating chart from the calculated load. The calculators are connected by a communication bus (3) e.g. controller area network (CAN) bus and ensure functioning of a handling machine. Sensors provide signals permitting to determine configuration and geometry of the machine, where the configuration is a static configuration or up and down movement configurations.
