Abstract (en)

The invention relates to a safe for the transport of documents, which not only safeguards the documents stored therein, but which is also equipped with means for detecting acts of vandalism such that, in the event of any attempted unauthorised access, document-destruction means are activated. For said purpose, the safe is equipped internally with a document case and an anti-corrosive container containing the corrosive liquid to be emptied. According to the invention, the means used to activate an alarm condition comprise vibrators or sensors that detect moisture, light, the door being opened with an incorrect code and a low battery that is not recharged. The corrosive liquid spray means comprise a self-suction injection pump and nozzles which are positioned on opposing surfaces of the document case.
