Abstract (en)
[origin: EP1830128A2] The structure has a combustion chamber (2) suspended upper plate (3). An under plate (4) rests against a combustion chamber of the upper plate. The upper plate (3) and or under plate are formed so that between them a duct system (10) is provided. The upper plate contains openings (12) which communicate with the duct system. The under plate has ranges (22) with openings (13) which communicate with a supply area (11) and which are arranged at the combustion chamber and at a side of the underplate. The upper plate has third openings (23) in which are arranged with the second opening. An independent claim is included for a burner.
