Abstract (en)
[origin: WO2006045068A2] A construction such as a toy or geometric sculpture for use by children or adults. The construction has a plurality of telescoping arms, at least three arms preferably being provided, the arms being connected without use of an intermediate torso. Further preferably, one or more arms includes jointed segments. The construction allows variation of the length of the arms via extension and retraction, and manipulation of the configuration of the arms via bending and rotation, allowing adjustment of the construction into a large number of shapes, providing significant entertainment and artistic value.
