Abstract (en)
[origin: EP1676776A1] The device has two deployable flexible slides (O11-O32), each comprising two ends (EX1, EX2), respectively integrated to units e.g. primary and secondary mirrors (M1, M2). The ends are arranged so that the slides are in a folded initial position and an unfolded final position in which the ends maintain the mirror (M1) spaced from the mirror (M2) of respective selected distances, where one distance is higher than the other distance. An independent claim is also included for a spatial equipment comprising units supporting device.
