Abstract (en)

[origin: WO2006072360A1] The invention relates to a method for largely eliminating chlorine compounds from organic isocyanates or isocyanate mixtures by contacting said isocyanates or isocyanate mixtures with a water-containing inert gas flow or an organic material having a cation-exchanging effect. The inventive method allows the isocyanates to be gently freed from chlorine-containing compounds and is particularly suitable for temperature-sensitive isocyanates.
