Abstract (en)

[origin: WO2006066416A1] A method of producing metabolites of a xenobiotic compound by biotransformation using a microorganism, wherein the xenobiotic compound is cyclosporin ISA247, which is delivered to the microorganism in a mixture with a surfactant. The method can be scaled up to produce large quantities of metabolites by, for example, biotransformation in a reactor. The metabolites produced by the present method can be used for antibody production, as standards in therapeutic dose monitoring, or in pharmaceutical applications.
