Abstract (en)
[origin: WO2006061462A1] The invention relates to a penetration reinforcement member (1) to be attached to reinforcement bars of a reinforced concrete casing slab. The penetration reinforcement member (1) comprises a lower part (2) that is substantially parallel to said reinforcement bars (10), the lower part comprising first fixed gripping means (14, 16) for attaching the penetration reinforcement member (1) to the reinforcement bars (10) of the reinforced concrete casing slab. The penetration reinforcement member (1) also comprises an upper part (4) which is perpendicular to the lower part (2) and extends to a top cast to be provided on the casting surface of the reinforced concrete casing slab and which comprises second fixed gripping means (7, 9) for attaching the penetration reinforcement member (1) to the reinforcement bars (10) of the reinforced concrete casing slab.
