Abstract (en)

[origin: WO2006066299A1] The invention relates to a retainer device for the connection of components, in particular of floor panels or floor panels and the retainer pieces thereof to give a floor covering. In order to simplify the connection process and to achieve a reliable connection, the retainer device comprises at least one adjuster element (4, 14, 24, 24') for essentially positive-fit connection and at least one retainer element (5, 15', 25, 25') for essentially frictional connection with corresponding counter-pieces on components for connection.
