Abstract (en)

[origin: WO2006069850A1] The invention relates to a method for operating an internal combustion engine provided with an electrically openable and closable injection valve (18). The aim of said invention is to reliably hold the valves open in all operation conditions. For this purpose, a holding current for the open valve (18) is switched from a standard value to an increased value in the determined operation conditions of the internal combustion engine and is reset to the standard value when said determined operation condition is over.
