Abstract (en)  
[origin: WO2006069873A1] The invention concerns a linear compressor comprising a pump chamber (14) wherein a (15) moves reciprocatingly, a frame which is integral with the pump chamber (14) and against which a floating body (8) is reciprocatingly maintained by at least one spring (4, 5), at least one electromagnet mounted on the frame (1, 2) for causing the reciprocating movement of the floating body (8). A translation rod (9) is connected to the piston (15) through a first articulation (12) and to the floating body (8) through a second articulation (11).
