Abstract (en)
[origin: WO2006069874A1] The invention concerns a deep-drawn inner coating or an inner door of a cooling equipment. An insertion element (5) is maintained by form-closure in a recess of a wall (1). In order to facilitate the accurate fixing of the position of a component incorporated in the insertion element, the insertion element (5) extends at least up to a plane flush with a surface (7) of the wall (1) surrounding the recess.
