Abstract (en)
[origin: WO2006069843A1] Disclosed are a semifinished product (2) and a support component (1) which is formed therewith and is used for electrical circuit designs that are placed thereupon and make it possible to produce prototypes or small series in an inexpensive and time-saving manner. In order to be able to do so, the semifinished product (2) comprises a planar, e.g. flexible, basic support material, across the entire area of which through-contacts (7) that are formed with nanovias are disposed in a regular constant pattern. Such a component can be produced using a single exposure template for forming the nanovias while making it possible to produce circuit designs that have any appearance on the surfaces thereof.
