Abstract (en)

[origin: EP1832684A1] The strip has a profile part forming a rear contact surface (11) for contacting at an outer wall of a building, and another profile part provided with a burl course intake and a bracing section (33). The latter profile part opens the burl course intake to the former profile part, and moved relative to the former profile part, so that a clamping gap limited by a clamping gap counter surface and a lower limitation of the burl course intake decreases by cooperation of the bracing section at a counter surface.
