Abstract (en)

A door (10), or window, of the type that can be opened and closed by an automatic mechanism comprises a frame (12) for mounting a leaf (14) that extends mainly in two dimensions and is slidably supported by an upper guide (16) relative to which the door is moved by a belt (18), or the like, that is driven by a respective motor (20). Means (22) are provided for controlling the motor (20) to open and close the door. Advantageously, the motor (20) is mounted at a side profile (13) of the door.
