Abstract (en)
[origin: WO2006069867A1] The invention relates to a device for wringing out a mop (101), with a flat holder (102) on the underside of which a mop cover (103) is arranged. The device is provided with a wringing device, embodied as a squeezing device with a press roller (110) and a counter-surface (109), whereby the press roller (110) and the counter-surface (109) form a through gap between them for the holder (102) and the mop cover (103) and are arranged and aligned such as to be able to press the holder (102) together with the mop cover (103) between them to wring out the mop cover (103). The press roller (110) and the counter-surface (109) may be relatively adjusted by a single adjuster (124) either manually or automatically and set to defined selectable separation values.
