Abstract (en)
[origin: WO2006061280A1] The invention relates to a dishwashing machine (1) equipped with a washing compartment (2) and with devices for washing dishes using a washing solution as well as with a sorption drying device, which is connected to the washing compartment in an air-conducting manner and which comprises a sorption column (10) containing reversibly dehydratable material (11), this sorption column (10) being used for drying the dishes. To this end, the sorption drying device comprises a sensor means (13) that, during the executing of a washing program, serves to detect the state of the reversibly dehydratable material (11) in order to influence the execution of the washing program according to the detected state.
