Abstract (en)

[origin: WO2006058431A1] A laminin receptor binding molecule is provided herein which promotes laminin receptor signal transduction and/or mediated event in a mammal and which may be used for treating diseases associated with an inefficient activation of a laminin receptor or an inefficient activation of a laminin receptor downstream effector. This molecule may also be used to inhibit laminin and its receptor mediated signaling in a mammal in need thereof.
