Abstract (en)

[origin: WO2006072275A1] The invention relates to a roller mill having a modular design. In order to make possible an increased nominal grinding capacity with a limited roll/oscillating lever mass and with a greater number of rolls, the supports are transferred toward the outside, and the oscillating lever pins, with regard to the transferred stands, are arranged in an off-center and radially inward manner between the grinding plate and the support.
