Abstract (en)

[origin: WO2006021878A1] The invention relates to a gantry crane (7) of a machine, for the exchange of sleepers on a track, which may be displaced in a machine longitudinal direction on crane tracks (11). Two crane buggies (12) on the gantry crane (7), at a separation from each other in the machine transverse direction are embodied such as to be displaced relative to the crane chassis (14) by means of a displacement drive for altering the gauge. The corresponding crane tracks (11) may be adjusted in the track transverse direction by drives (20) to change the gauge.
