Abstract (en)

An inflatable bag (10) for providing a cushion or pillow by inflating said bag, which bag comprises two sheets (12,14) of two-layer foil material. The sheets are of substantially identical geometrical shape and define an outer periphery, a peripheral joint extending along the major part of the outer periphery of the sheets, except for a peripheral area which constitutes an inlet opening of the bag. The peripheral joint joins said sheets together in substantially overlapping relationship and defines an inner space (16) within the interior of the bag, and a closable and sealable closure (36) is provided at the opening for allowing an inflation medium to be introduced into the inner chamber through the closable and sealable closure from the environment.
