Abstract (en)

[origin: EP1834554A2] The tensioning device on a stand (2) for tensioning a rod-form component (3), especially a Christmas tree, includes a force transmission element (4) which by one end is wound on a rotatable tensioning component (5), wherein for operating the rotatable tensioning component, a drive wheel (7) is provided, the diameter of which is a multiple of the diameter of the rotatable tensioning component. The drive wheel shares with the rotatable tensioning component a common axis (18) and is connected to it in a torsionally fixed manner. An independent claim is included for a stand for tensioning a rod-form element, especially a Christmas tree, equipped with the proposed tensioning device.
