Abstract (en)

[origin: EP1834774A2] The device for fastening a flexible covering on a cylinder of a rotary printing press, with at least one axially parallel channel in the cylinder forming a slot for inserting and withdrawing the ends of the covering, has at least one support element (8) arranged inside the channel next to a clamping component (5). The support element engages in at least one elongated hole (9) in the clamping component, wherein by movement of adjusting element (7) a relative movement between support element and clamping component can be effected.
