Abstract (en)
[origin: EP1834782A2] There is disclosed a small and thin ink jet head having an excellent productivity, in which Piezoelectric elements capable of developing a large displacement amount and a high displacement generation force can highly densely be arranged together with ink chambers and nozzles and in which generation of crosstalk is inhibited. A discharge device 1 comprises a channel section 12 in which a plurality of channels are formed, each channel having an introduction hole 61, a pressurizing chamber 3 and a discharge hole 62; and an actuator section 11 having a top plate 71, a pair of support walls 72 arranged at opposite ends of the top plate 71 and a plurality of piezoelectric elements 4 hanging from the top plate 71, spread between the pair of support walls 72, arranged independently of one another and forming pairs with the channels. In this discharge device 1, the actuator section 11 and the channel section 12 are integrated so as to allow distal end surfaces of the piezoelectric elements 4 to abut on the ceiling walls 7 of the pressurizing chambers 3, the ceiling walls 7 are bent by displacements of the piezoelectric elements 4 to change capacities of the pressurizing chambers 3, and the fluid can be pressurized to discharge the fluid from the discharge holes 62.
