Abstract (en)
[origin: EP1834870A1] The boat has a press-body (2) and an outer shell surrounding the press-body. A submarine boat rescue device (6) is supported between the press-body and the shell. A linear drive is arranged outside an outer contour of the press-body for processing the rescue device from a bearing position into a position outside the shell. A movable bearing (8) is movably coupled with the drive. The bearing is arranged in a bearing frame (4) that is reinforced to the press-body. The rescue device is flexibly fixed in a bearing position in a direction transverse to an extended direction.
