Abstract (en)  
[origin: EP1834916A1] The drum has a drum body (14), which is rotatably mounted at a stand frame (12) around a drum axle. A winding device (24) exhibits a cord winding disk that is drivingly coupled for winding a hose or cable with the drum body, and a cover (27) is assigned to the cord winding disk. The cover is fitted at the stand frame for receiving torque arising during a winding process, and a torque support (28) of the winding device is assigned to the cover. The torque support is connected with the cover, and is detachably fixed at the frame in a torque proof manner.
