Abstract (en)

[origin: EP1835061A1] A method and assembly including a textile treatment apparatus (14) for combinatory wet and dry treatment of textile articles in the same apparatus (14) in endless rope form under vacuum and ventilation effect are disclosed. The assembly comprises a blower line (22), a process bath circulation line (33) and a vacuum line (42) that are independently controlled and constructed preferably without an interconnection therebetween. The lines (22, 33, 42) are connected to the apparatus (14) from different positions, thereby providing independent operation of each line and dynamic process control in the overall system.
