Abstract (en)

[origin: EP1835089A2] The device has a supporting surface (51) with friction-reducing inserts (54) and/or supports formed by brushes and/or fiber blanket. The friction-reducing inserts and/or the supports are formed in a form of strips that are parallel to an axial of a winding shaft. The inserts and/or the supports are glued on the supporting surface, where the supporting surface has a concave form e.g. a partial-cylindrical form. An independent claim is also included for a sun-shade and/or vision protection device.
